

- 1) Naming schemes
  - 1) Name server?
  - 2) Specific to event subtypes?
  
- 2) Communicating discoveries
  - 1) IAU
  - 2) ATEL
  - 3) Web pages
  
- 3) Sharing information in real time
  - 1) Scheduling resources e.g. I'm going to observe this tonight.
  - 2) Here's the redshift, type, and spectrum.
  - 3) Here are the light curve points in all wavelengths
  - 4) Social media type interactions
  
- 4) Iterating the above
  
- 5) Automated telescope triggering
  
- 6) Archiving data / querying databases

Questions:

What types of events can work under the same system? Supernovae, GRBs, microlensing, planets, variable stars, flares, etc.

Do we adapt existing infrastructure? Build something new?

Where does the money come from?

Do we need the IAU?

Does it need to scale to LSST?
